BPW Turntables with double ball race

Features

- The quality of BPW double ball race turntables is superior to conventional single race turntables.
- BPW Turntables feature two fully active ball races which have been renowned for numerous years as quality products for draw bar trailers, semi trailers, heavy load transporters and special transportation vehicles.
- BPW Turntables are equipped with supporting and retaining ball races between the upper and lower rings. All active forces are therefore distributed between the two ball races.
- Their design principals ensure maximum reliability because the axial and radial forces are distributed between the two ball races.

Benefits

- BPW Turntables guarantee a minimum of idle time due to their long service life.
- The ball race is especially hardened for extended life
- The interior is well protected against dust and dirt by a multi-lip seal.
- These advantages result in a continuously smooth operation and long life expectancy.
