## What's News?

There's some good news and some bad news .... and sometimes vice-versa...

Oil, bread, fruit and sugar were cheaper than they were a year ago... Beer, spirits, wine, meat and vegetables (including chicken) are NOT!

With August's increase, fuel prices have increased for the 5th month in a row pushing the retail inland price of fuel to over R16/litre...

Last month's increase was only "6 cents", the outlook looks stable for next month and BPW offers a range of innovative solutions that will either increase your payload or increase your fuel savings:

1. Recently introduced AL clamped air suspension on 120 square 10mm WT 2140 track axle beam: max 40kg lighter than the welded version.
2. Recently introduced AL HD welded air suspension: max 24kg lighter than the SL suspension it replaces.
3. A wide range of DAKEN plastic toolboxes that not only act as side-impact protection and are TUV tested to be water-and-dust-resistant, but are also up to 100kg lighter than similarly sized steel toolboxes (DAB1009 - 1250mm model).
4. Speedline Truck aluminium wheels, one of only two OE approved wheels in Europe, stronger than steel wheels and between 140 – 340kg lighter depending on single/dual wheel vehicle combination!

*Don't delay, ask your BPW area manager or distributor partner for more information today!*

BPW Spare Parts Service Network List [Click Here](#)

On the 4th of July 2018, we advised that BPW spare part prices would increase by 7%... after finalising the increases, the effect of the increase to a wide high-volume BPW parts basket was actually only 5%, and as notified in our increase letter, original BPW air bags and brake drums, amongst many other fast-moving parts, **did not increase**.

If you take a "tour" of "who we are and what we do", you'll note that the first words that "greet" you are: **safety, efficiency and innovation**.

You will see that that long service life doesn't just happen by chance, and that even after 120 years, BPW original parts are continually being developed further, offering you the security of knowing they are built to match your running gear system precisely thereby guaranteeing **maximum performance**.

## BPW Spare Parts

Last month we spoke at length about the critical importance of properly re-lining brake shoes and shared with you the following links to BPW service and maintenance manuals:

- BPW Trailer Axles with Drum Brakes (n.b. chapter 7 pages 48 – 71) [Click Here](#)
- BPW Wear and Damage Characteristics on Friction Brakes [Click Here](#)

We strongly emphasised that failure to adhere to the service guidelines may and/or will eventually result in

- Uneven lining wear
- Damage to brake drum
- Unwanted brake-downs and
- Possible axle failure (due to damage to brake anchor pin).

Therefore, with the theme of "safety" in mind, we would like to advise that from the 1st of September 2018, BPW Axles will only be supplying the "brake repair kits" that include the full set of return springs and c-clips per axle and will no longer supply these as individual loose items.

The kits, for H, KH and NH axle ranges, are already competitively priced, offering a substantial saving than when buying the individual items loose.

Our mission is to provide customers with the best possible support for their business. For BPW, the first priority therefore entails addressing their needs. We listen to our customers and pledge our support in every situation. This collaborative approach is reflected in our slogan: "we think transport"

At BPW we recognise that even when commercial vehicles are out of warranty, they nevertheless must have a productive "second life". While we'll always advocate the use of BPW original parts, we're aware that some fleet operators pursue a repair policy that matches the costs to the vehicle's current value.

Through its subsidiary PE Automotive, BPW is now in a position to offer their customers top-quality original spare parts, as well as, high-quality PE-branded spare parts that represent a genuine alternative for operators of older vehicles to the many "white-or-no-box" options available.

PE Automotive founded in 1947, offers an extensive range of in-house developed "work-shop focused" spare parts for commercial vehicles. Its international registered trademark, PE, is one of the leading providers to the independent parts aftermarket, where a high-level of trust has been created, even in the most demanding of independent and affiliated workshops.

PE quality spare parts, are offered in Southern Africa with a 2 years warranty for truck and a 1 year warranty for trailer, making the transporters transition from **OE to PE**, a trusted one.
